I am currently unable to install the SDK. I have it enabled in the games properties setting, and it is acting as if it's supposed to be installed. But it isn't. When I go to launch the game, it should give me the option to launch either the normal game or the SDK. But it doesn't. It just launches Depth. I am unsure what to do, and am requesting help. I will not leave negative feedback, and will recommend this because I want to see the community grow, but I would also like to be a part of this community, being as I've been with the game for a couple years now. Please help.. To open depth editor all you have to do is right click depth and press launch depth editor. I am currently unable to install the SDK.
